College Fest 2026 – Event Management Website

1. Introduction

The College Fest 2026 website is a simple and user-friendly web application developed using HTML and CSS. The main purpose of this project is to provide information about a college festival, including technical events, cultural programs, workshops, event schedules, rules, coordinators, and participant registration.

The website provides a single platform where students can view the details of the college fest and select an event in which they are interested. It includes a navigation menu that allows users to move easily between different sections of the website.

The website uses an attractive purple-themed design, event cards, and a registration form to make the interface visually appealing and easy to understand. It is designed to provide students with essential festival information in an organized manner.

The fest is scheduled for 15 November 2026, at the college campus, according to the website content.

2. Objectives

The main objectives of this project are:

- To develop a simple and attractive college festival website.
- To display information about technical events, cultural programs, and workshops.
- To provide an organized event schedule for participants.
- To display event rules and coordinator details.
- To provide a registration form for students.
- To improve accessibility to festival information through a web browser.
- To create a responsive layout suitable for different screen sizes.

3. Features

The College Fest 2026 website provides the following features:

3.1. Home Page

- Displays the title “College Fest 2026”.
- Shows a welcome message and festival tagline.

- Provides the fest date and venue.
- Gives visitors an overview of the event.

3.2. Navigation Menu

- Contains Home, Events, Schedule, Rules, and Register links.
- Allows users to navigate to different sections of the same webpage.
- Uses anchor links for easy navigation.

3.3. Events Section

The website displays three main categories of activities:

- Technical Events: Paper Presentation, Coding Competition, and Web Design.
- Cultural Events: Dance Competition, Singing, and Fashion Show.
- Workshops: Artificial Intelligence, Web Development, and Robotics.

3.4. Event Schedule

The schedule displays the planned activities and their timings.

Time	**Activity**
9:00 AM	Inauguration
10:00 AM	Technical Events
1:00 PM	Cultural Programs
4:00 PM	Prize Distribution

3.5. Event Rules

The website displays important rules for participants, such as carrying college ID cards, registering before the event, maintaining discipline, and following competition time limits.

3.6. Event Coordinators

The website provides coordinator information for different event categories:

- Technical Events: Rahul
- Cultural Events: Priya
- Workshops: Arjun

3.7. Registration Form

The registration section contains fields for:

- Student name
- Email address
- College name
- Event selection

The form uses HTML validation attributes such as required and an email input type to help ensure that users enter the required information.

3.8. Attractive User Interface

- Purple-themed colors and a consistent design.
- Event cards with rounded corners and shadows.
- Clear headings and readable text.
- Responsive styling for smaller screens using CSS media queries.

4. Technologies Used

Technology	**Purpose**
HTML5	Creates the structure and content of the website.
CSS3	Styles the webpage, including colors, spacing, cards, and layout.
Flexbox	Arranges event cards in a flexible layout.
CSS Media Queries	Adjusts the layout for smaller screens.
HTML Forms	Collects participant information and event selections.

5. Applications

The College Fest 2026 website can be used for the following purposes:

1. College Festival Management: Provides a central webpage for festival information.
2. Student Information: Helps students learn about events, workshops, and competition schedules.

3. Event Promotion: Can be used to publicize technical and cultural activities organized by a college.
4. Participant Registration Interface: Provides a form through which students can enter their details and choose an event.
5. Event Coordination: Displays coordinator details and festival rules.
6. Educational Purposes: Serves as a beginner-level web development project for learning HTML and CSS.
7. Workshop Information: Helps students identify workshops related to artificial intelligence, web development, and robotics.

6. Working of the Project

The website works through the following steps:

1. The user opens the College Fest 2026 webpage in a web browser.
2. The home section displays the festival name, date, venue, and welcome message.
3. The user navigates to the Events section to view available activities.
4. The Schedule section displays the planned timings of the activities.
5. The Rules and Event Coordinators sections provide additional information.
6. The user moves to the Register section and enters their name, email address, college name, and preferred event.
7. The HTML form checks its required fields and email format before allowing a normal form submission attempt.

Important technical limitation: The supplied code contains only HTML and CSS. It does not include a backend, database, or JavaScript registration handler. Therefore, it displays a registration interface, but it does not currently save registrations or send confirmation messages.

7. Advantages

- Simple and easy-to-use interface.
- Easy navigation between sections.
- Attractive presentation of event details.
- No complex installation is required to view the webpage.

- Responsive layout for smaller screens.
- Easy to modify and maintain.
- Useful for learning fundamental web development concepts.

8. Limitations

- Registration details are not stored in a database.
- No login or authentication system is provided.
- The event schedule is static and must be updated manually in the HTML code.
- No online payment facility is included.
- No automated email or registration confirmation is implemented.
- Event information is not managed through an administrative dashboard.

9. Future Enhancements

The project can be improved by adding:

- JavaScript for interactive form handling and additional validation.
- A database such as MySQL to store participant details.
- A backend using PHP, Python, or Node.js.
- Automated registration confirmation through email.
- An administrator dashboard to manage events and participants.
- Search and filtering options for events.
- Online payment and digital participation certificates.
- Dynamic event schedules and registration status updates.

10. Conclusion

The College Fest 2026 Event Management Website is a basic web development project designed to present college festival information in a clear and organized manner. It includes a home page, navigation menu, event categories, schedule, rules, coordinator details, and a registration form.

The project demonstrates the practical use of HTML for webpage structure and CSS for visual design and responsive layouts. It provides a useful foundation for developing a more

advanced college event management system by integrating JavaScript, backend technologies, and database connectivity in the future.
