VELVET & VANILLA CAFE

Website Project Documentation

1. Introduction

Velvet & Vanilla Cafe is a responsive website designed to present a cozy cafe in an attractive and user-friendly way. The webpage introduces the cafe, displays its signature food and drinks, shares information about the chefs and ambience, and allows visitors to send a table reservation request. The project is developed using HTML and CSS, with a small JavaScript alert for reservation form feedback.

2. Features

• Responsive header and navigation links that move to sections of the webpage.
• Hero section with a background image, welcome message, and menu button.
• Signature menu cards showing food images, descriptions, and prices.
• About section describing the cafe ambience and experience.
• Chef profiles with photographs and role descriptions.
• Customer review section with star ratings and feedback.
• Cafe location, opening hours, and contact information.
• Reservation form with name, email, phone, date, time, and guest-count fields.
• Hover effects, rounded cards, shadows, and a warm cafe color palette.
• Responsive styling for smaller screens using a CSS media query.

3. Applications

This website can be used by a cafe or small restaurant to introduce its brand and showcase its menu online. Customers can view popular dishes, learn about the cafe, read reviews, check contact details, and submit a reservation request. It can also be used as a student web-development project to demonstrate basic HTML structure, CSS styling, responsive design, navigation, and form validation.

4. Future Scope

In the future, the website can be improved by connecting the reservation form to a database so that bookings are stored and managed. Online ordering, payment options, a menu search, customer login, an admin dashboard, and real-time table availability can also be added. The cafe could further improve accessibility and optimize images for faster loading.

5. Conclusion

Velvet & Vanilla Cafe is a simple and attractive cafe website that combines useful information with a pleasant visual design. It demonstrates how HTML and CSS can be used to build a responsive webpage with menu cards, navigation, customer reviews, and a reservation form. This project provides a good foundation for adding more advanced cafe services in the future.

6. HTML and CSS Code

The following is the website source code provided for this project.

```
<!DOCTYPE html>
<html>
<head>
    <title>Velvet & Vanilla Cafe</title>
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <style>
        * { box-sizing: border-box; scroll-behavior: smooth; }
